Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance:

The present invention is directed to a method for identifying nucleotides at one or more base positions in a plurality of target nucleic acid molecules, comprising:

- a) synthesizing extension products of the target nucleic acid in the presence of chain terminating nucleotides and mass-matched nucleotides;
- b) determining the mass of each extension product; and
- c) calculating a mass shift from a period for the mass of each extension product, whereby the nucleotides in the target nucleic acid molecules are identified by determining the nucleotide that corresponds to each mass shift.

Although Brennan (U.S. Patent 5,174,962) (December 29, 1992) teaches a method for identifying nucleotides at one or more base positions in a plurality of target nucleic acid molecules, comprising:

- a) synthesizing extension products of the target nucleic acid in the presence of chain terminating nucleotides;
- b) determining the mass of each extension product; and
- c) calculating a mass shift from a period for the mass of each extension product, whereby the nucleotides in the target nucleic acid molecules are identified by determining the nucleotide that corresponds to each mass shift,

Art Unit: 1634

Brennan does not teach an essential element of step (a), which is mass-matched nucleotides.

In view of the absence of either teaching or suggestion of such a step (a) of synthesizing extension products of the target nucleic acid in the presence of chain terminating nucleotides and mass-matched nucleotides, the present invention is novel and non-obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
